

DEGAROUTE®

Project Profile – *Intersection/Legend*

General Information:

Country: USA
 Location: Santa Ana, California
 Application Date: July 2010
 Applicator: Orange County Striping

Project Objective:

Historically, the city had used “thin set” (30 mil) thermoplastic. Because of price increases and material shortage, the city agreed to use Degaroute® road markings. Orange County Striping, using DTC 98:2 spray equipment, applied approximately 150 STOP and BAR(s). To date both the City and Contractor are impressed with the results.

Application:

System: Flat Spray
 Type: 98:2
 Equipment: DTC 98:2 Polymix (pallet mount)
 Thickness: 30 mils

Performance:

- After 12 months, all STOP and BAR(s) show excellent presence and little wear
- City and Contractor are please with results and continue to monitor and evaluate Degaroute for future use.
