

## DEGAROUTE®

### Profile Markings help saving lives

#### General Information:

Country:	Germany
Location:	German–Polish border (in Forst City)
Applicator:	Limburger Lackfabrik GmbH. (Test application)
Application Date:	January, 2012

#### Project Objective:

A particular intersection near the German–Polish border, crossing Sacro in the Spree–Neiße district, has worried the local transport authority for years due to its numerous accidents. To provide relief at this accident prone intersection, novel cold plastic rumble strips were applied to improve the safety at this accident blackspot.

The 1 cm thick, shiny yellow marking strips were installed perpendicular to the road, getting the drivers' attention through colour contrast, vibrations and noise. In 2010 there were 8 accidents, mostly caused by speeding and some of them involving casualties. Since the application of the rumble strips, not a single accident has occurred.

#### Road Marking System:

DEGAROUTE® based Cold Plastics for bright yellow rumble strips produced by Limburger Lackfabrik GmbH.
